

## Perfluorinated Organic Compounds – PFCs

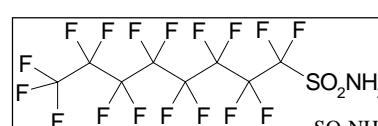

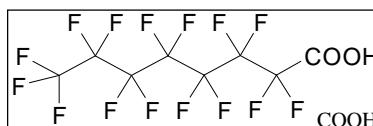

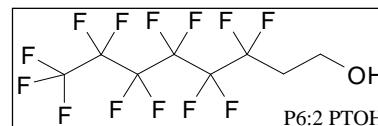

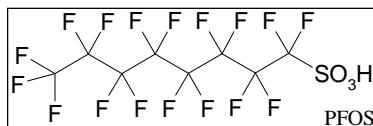

**Perfluorinated Organic Compounds (PFCs)** are used in numerous commercial products like fire protection agents, textile protection agents, floor polishers, detergents, paints, paper treatment agents and electronic equipment.

The first PFCs (PFAs = Perfluorinated alkanoic acids, alcohols and sulfonic acids) were based on Perfluorooctanesulfonic Acid (PFOS) and Perfluorooctanoic Acid (PFOA). However, due to environmental reports with warning about the bioaccumulation of these compounds, new and more readily biodegradable substances have been introduced. Typically, these are various telomeric acids, alcohols and sulfonamides.

The biodegradation-route of the commercial telomers is currently under investigation and new metabolites are likely to be found.

Chiron now offers a large range of PFCs and its telomeric acid, alcohols and possible metabolites.
