

## Highly Purified Natural Toxins for Food Analysis

Chiron has built up a strong track record of supplying new reference standards during the past 25 years of operation. We are now proud to announce our extended offer of Highly Purified Natural Toxins for Food Analysis:

### Mycotoxins

### Plant toxins

### Marine toxins

The basis of a good analytical method is the availability of appropriate standards of defined purity and concentration.

Our mission is to market highly purified toxin calibrants in crystalline as well as standardized solutions for chemical analysis, including internal standards.

Your benefits using our standards include

- ◇ Fast turnover time due to excellent service
- ◇ Guaranteed high and consistent quality
- ◇ Sufficient capacity to serve the market, and bulk quantities available on request
- ◇ Custom solutions on request.

Reference materials (RM) play an important role as they build the link between the Measurement result in the laboratory and international recognized standards in the Traceability chain. Our standards are made according to the general requirements of ISO 17025 and ISO guides 30-35.
